

PETER RAYMOND

Product Leader | Recommendations, Personalization & AI Marketing Technology

New York, NY • 347-303-9492 • peterraymond5789@gmail.com • praymond24.github.io/RES • linkedin.com/in/peterraymond24

SUMMARY

Product leader with nearly 10 years building recommendation and personalization products, most recently as Director of Product, Artificial Intelligence at Just Salad, where I led a team of seven and owned the recommendation surface end to end for a brand with 5.6M annual digital orders. I have shipped algorithm-driven personalization to consumers, partnered with data teams to set model goals and review outputs, and built the evaluation frameworks that tell a company whether a recommendation is actually working. Product career began inside advertising and digital agencies shipping e-commerce, analytics, and customer-engagement products.

EXPERTISE

Product Recommendations • Personalization Engines • Algorithm-Driven Products • Product Catalog & Item Data • Affinity and Behavioral Targeting • Data Science Partnership • Model Performance Measurement • Experimentation & A/B Testing • Customer Lifecycle Marketing • Digital Ordering & E-commerce • Adoption & GTM Enablement • Product Strategy & Multi-Year Roadmaps • Team Leadership • LLMs & Prompt Engineering • APIs • SQL • Snowflake • AWS • Jira • Figma

EXPERIENCE

Director of Product, Artificial Intelligence | Just Salad

New York, NY | Mar 2024 – Sep 2025

- Launched [Salad AI](#), a guest-facing recommendation product that converts a preference survey across lifestyle, nutrition, and taste into four tailored item recommendations, each with a generated name, full ingredient and nutrition detail, and a pairing suggestion. Launched January 2025 and covered by PR Newswire.
- Increased order conversion 6% and recommendation CTR 8% by improving recommendation quality, personalization logic, and customer journeys informed by behavioral and transaction data across 5.6M annual digital orders.
- Owned the recommendation surface end to end: item and menu data structure, personalization logic, the placements recommendations appeared in, and the internal tooling used to configure and test them. [Confirm this matches how catalog and item data actually worked at Just Salad before sending.]
- Developed objective frameworks for measuring recommendation quality, model output review, customer adoption, and business impact, and used them to decide what shipped and what was rolled back.
- Partnered with the Data team to set goals for recommendation strategies, review model outputs, and translate performance into roadmap decisions.
- Reduced experiment cycle time 30% by standardizing hypotheses, evaluation criteria, quality reviews, and launch-readiness checkpoints across betas and staged rollouts.
- Served as the internal evangelist for AI and personalization, increasing adoption 25% and reducing time-to-value 20% through demos, company-wide presentations, lunch-and-learn training, and implementation playbooks that let Marketing, CX, and Operations position and use the capability confidently.
- Built and led a team of 7, including 2 product managers and 5 engineers, and coached junior PMs on discovery, requirements writing, and stakeholder communication.
- Conceived and delivered a cross-departmental insights dashboard unifying transaction data, customer reviews via Momos, social engagement via Sprout Social, inventory levels, loyalty-program usage, and app signups into a single view of customer and business trends.
- Owned evaluation, selection, and integration of foundation-model providers including OpenAI, Anthropic, Google, and Microsoft, matching model capability to use case against cost, latency, and data-handling requirements.
- Translated ambiguous customer and operational needs into prioritized roadmaps and communicated strategy, dependencies, and risk directly to four C-level department heads.

Product & AI Strategy Consultant | Independent

New York, NY / Remote | Nov 2025 – Present

- Advise founders and operators on AI product strategy, personalization, LLM-powered features, and go-to-market planning across food technology, media, and consumer apps.

- Define LLM use cases, prompt and interaction requirements, evaluation criteria, and quality-review processes so teams can measure whether an AI feature works before it ships.

Senior Program Manager | DroneUp / Walmart Partner

Virginia / New York | Aug 2021 – Feb 2024

- Owned product and roadmap execution for the technology powering Walmart drone-delivery operations across dispatch, live monitoring, and exception handling in a regulated, safety-critical environment.
- Improved completed deliveries 6% and reduced human intervention 15% through workflow automation, telemetry, and reliability improvements, making crisp tradeoff decisions with incomplete data under operational pressure.
- Managed the full release lifecycle across requirements, dependencies, launch readiness, rollback planning, and incident response, coordinating Engineering, Operations, Product, Legal, and Compliance across multiple markets.

Senior Product Manager | Ayni Brigade

New York, NY | Mar 2019 – Feb 2021

- Led product strategy and delivery for e-commerce, analytics products, and customer-engagement experiences for brand and agency clients.
- Translated client briefs, business goals, and customer research into product requirements, roadmaps, user stories, and release plans.

Product Manager | VaynerMedia

New York, NY | Dec 2016 – Feb 2019

- Shipped brand-facing digital products including e-commerce, mobile applications, and customer-engagement experiences for major consumer brands.

EDUCATION

Master of Business Administration, Jacksonville University
